

ABSTRACT

A rubber composition comprises a rubber component. The rubber component contains (A) 1-70 weight parts of polybutadiene 5 rubber having a Mooney viscosity (ML) of 35-50 and composed of (a) 1-9 weight % of a boiled n-hexane insoluble fraction having a melting point of 180 °C or higher and (b) 99-91 weight % of a boiled n-hexane soluble fraction. The rubber component also contains (B) 99-30 weight parts of diene-based rubber other than 10 (A). A crosslinking coagent (C) is mixed in the rubber component.
